Assignment 13:

Write a C program that accepts a string as a command line argument and includes a user- defined function named isPalindrome with the signature int isPalindrome(char str[]);. The function should check if the given string is a palindrome and return 1 if it is, and 0 otherwise.

Source Code:

```
#include<stdio.h>
#include<string.h>
int isPalindrome(char str[]) {
   int len,i,j;
   len = strlen(str);
   i = 0;
   j = len - 1;
   while (i<j) {
      if (str[i]!=str[j])
         return 0;
      i++;
      j--;
   }
   return 1;
}
int main(int argc, char *argv[]) {
   if (argc!=2) {
      printf("Invalid Input.");
      return 1;
   }
   if (isPalindrome(argv[1]))
      printf("This string is a Palindrome.");
   else
      printf("This string is not a Palindrome.");
   return 0;
}
```

Output:

```
Assignment[13].exe hello
This string is not a Palindrome.
```

```
Assignment[13].exe madam
This string is a Palindrome.
```
