Assignment 14:

Write a C program that opens its own source code file, reads its contents, and then prints the contents to the console.

Source Code:

```
#include<stdio.h>
int main() {
   FILE *f;
   int ch;
   f = fopen(__FILE__,"r");
   if (f==NULL) {
      printf("ERROR : File opening FAILED!");
      return 1;
   }
   ch = fgetc(f);
   while (ch != EOF) {
      printf("%c",ch);
      ch = fgetc(f);
   }
   fclose(f);
   return 0;
}
```

Output:

```
#include<stdio.h>
int main() {
    FILE *f;
    int ch;
    f = fopen(__FILE__,"r");
    if (f==NULL) {
        printf("ERROR : File opening FAILED!");
        return 1;
    }
    ch = fgetc(f);
    while (ch != EOF) {
        printf("%c",ch);
        ch = fgetc(f);
    }
    fclose(f);
    return 0;
}
Process finished with exit code 0
```
