Assignment 5:

Write a C program that defines an array of integers, and includes a user-defined function named reverseArray with the signature void reverseArray(int arr[], int size);. The function should reverse the elements of the array.

Source Code:

```
#include<stdio.h>
void reverseArray(int arr[], int size) {
   int i,j=size-1;
   for (i=0;i<j;i++) {
      arr[i] = arr[i]^arr[j];
      arr[j] = arr[i]^arr[j];
      arr[i] = arr[i]^arr[j];
      j--;
   }
}
void displayArray(int arr[], int size) {
   int i;
   for (i=0;i<size;i++)
      printf(" %d",arr[i]);
}
int main() {
   int n,i,arr[10];
   printf("Enter the array size : ");
   scanf("%d",&n);
   printf("Enter the number of elements : ");
   for (i=0;i<n;i++)
      scanf("%d",&arr[i]);
   printf("Before reversing the Array : ");
   displayArray(arr,n);
   reverseArray(arr,n);
   printf("\nAfter reversing the Array : ");
   displayArray(arr,n);
   return 0;
}
```

Output:

```
Enter the array size :6

Enter the number of elements :5 8 7 2 3 9

Before reversing the Array :  5 8 7 2 3 9
After reversing the Array :  9 3 2 7 8 5
Process finished with exit code 0
```

```
Enter the array size :4

Enter the number of elements :8 9 4 7

Before reversing the Array :  8 9 4 7
After reversing the Array :  7 4 9 8
Process finished with exit code 0
```
