Assignment 6:

Write a C program that includes a user-defined function named findLargest with the signature int findLargest(int arr[], int size);. The function should take an array of integers and its size, and return the largest element in the array.

Source Code:

```
#include<stdio.h>
int findLargest(int arr[], int size) {
   int i,m=arr[0];
   for (i=1;i<size;i++) {
      if (m<arr[i])
         m=arr[i];
   }
   return m;

}
int main() {
   int i,n,arr[10],Largest;
   printf("Enter the array size : ");
   scanf("%d",&n);
   printf("Enter the number of elements : ");
   for (i=0;i<n;i++)
      scanf("%d",&arr[i]);
   Largest = findLargest(arr,n);
   printf("The Largest number in the array is %d",Largest);
   return 0;
}
```

Output:

```
Enter the array size :3

Enter the number of elements :8 5 9

The Largest number in the array is 9
Process finished with exit code 0
```

```
Enter the array size :5

Enter the number of elements :89 45 99 23 75

The Largest number in the array is 99
Process finished with exit code 0
```
